

A MAP OF THE EMPIRE

The Map below shows only the basic geography of the Islands beyond Yamano itself but does show the relationship of the Islands to one another. Mountain ranges are marked in order that the GM and Players can get an impression of the overall terrain of each island.

The map has neither a Scale Bar or a Compass Rose, allowing GM's to decide for themselves how large the Empire is and to fit it onto their existing world maps if desired. In my own games Yamano is 520 miles diagonally when measured from the North-East to the South-West tips.
